Matrixcel Business
Sousse, Tunisia

Subject: Application — React.js Front-End & AI Developer (Sousse)

Dear Hiring Manager,

Your posting for a React.js front-end developer who can help bring AI-powered features into internal business platforms is a close match for the work I do every day. I have delivered four client web applications end-to-end with React.js and Next.js — reusable components, routing, state management, and REST API integration — and I enjoy turning operational needs into clean, maintainable interfaces.

Technically, I work with React Hooks, JavaScript ES6+, TypeScript, Next.js, and Tailwind CSS, integrating REST APIs with asynchronous data flows and third-party services such as Stripe payments and Twilio SMS OTP, backed by Git, automated tests, and GitHub Actions CI/CD. On the AI side, generative assistants are already part of my daily development workflow, and the patterns for LLM API integration — secure keys, async calls, error handling — mirror the REST integrations I ship today. I am keen to apply them to intelligent search, document processing, and workflow automation.

I hold a Bachelor in Information Systems (Highest Honors) and work in professional English. Based in Gabes, I am ready to relocate for this 100% on-site role in Sousse and would welcome the opportunity to discuss how I can contribute to Matrixcel's technology team.

Yours faithfully,

Mohamed Amine Nasfi
