LinkedIn | GitHub | Portfolio

Summary

Automation-minded engineer who starts from the process, not the tool: I map how a workflow runs, find the repetitive steps and manual error points, then build the smallest automation that removes them. Delivered a web tool that cut a 5-person team's data-entry time by 70% at Groupe Chimique Tunisien, a Python data-harvesting pipeline (scraping, cleaning, structured reporting), and a Chrome extension that fills application forms automatically. I use AI assistants daily for research, structuring information and code review, validating every output against real data. Professional English; on-site ready in Sousse.

Experience

Client Operations & Workflow Automation — Freelance (Remote) *Nov 2025 – Present*
International Clients *Remote*

- Run end-to-end client operations for 4 international accounts: requirements capture, quoting, delivery, invoicing and follow-up, with structured records kept for every engagement.
- Identified repetitive administrative steps in each engagement and replaced them with scripts and templates, cutting turnaround time on recurring tasks.
- Use AI assistants daily for research, structuring information and drafting, validating every output against source data before it reaches a client.

Full-Stack Developer & Automation Builder — Freelance (Remote) *Nov 2025 – Present*
International Clients *Remote*

- Built 4 complete web applications end-to-end, including API integrations (Stripe payments, Twilio OTP) that removed manual steps from client workflows.
- Developed and maintained REST APIs and data-processing scripts in Python and Node.js, with error handling and monitoring on the deployed environments.
- Deployed and documented each solution in production (Linux, Docker, CI/CD), including operating instructions for non-technical client staff.

Business Process Automation — Intern *Jul 2024 – Aug 2024*
Groupe Chimique Tunisien (GCT) *Gabes, Tunisia*

- Analysed a 5-person operational team's data-entry workflow, documented each step and identified where time and accuracy were lost.
- Built an internal web tool (PHP, SQL) automating the process: 70% less data-entry time for the team, measured before and after rollout.
- Wrote the user documentation and trained staff on the new process to secure adoption.

Technical Skills

Business Process & Operations: Process analysis and requirements gathering, documentation of procedures, data management and operational reporting, order/billing workflows, prioritisation of manual and error-prone tasks.
Automation & AI: Python, JavaScript/TypeScript and Node.js scripting; Python automation (Selenium, BeautifulSoup, Scrapy, Pandas); Chrome MV3 extension automation; REST API and JSON/webhook integration; prompt design for structured AI outputs and human validation of results; Git.
Data & Excel: Excel (formulas, lookups, data validation, structured reporting), CSV/JSON extraction and cleaning, SQL/PostgreSQL, MongoDB, data consistency checks.
Quality & Documentation: Workflow testing and error handling, post-deployment monitoring, operating instructions and troubleshooting procedures, measurement of time saved and errors reduced.
Languages: English (professional, daily working language with international clients), French (fluent), Arabic (native).

Projects

Universal Web Scraper — Data Harvesting & Cleaning Pipeline — *Python · BeautifulSoup · Scrapy · Selenium · Pandas*
Automation that collects data from static and dynamic sites, cleans and structures it into JSON/CSV for analysis and reporting — replacing hours of manual copy-paste with a repeatable, testable pipeline.

ApplyFlow — Workflow Tracker & Browser Automation Extension — *Next.js · NestJS · TypeScript · MongoDB · Stripe*
Kanban workflow tracker with a Chrome MV3 extension that fills web forms automatically from stored records — the same pattern as any repetitive data-entry automation.

Rental Management System — Business Operations ERP (Desktop) — *Python · PyQt5 · SQLite · PyInstaller*
Business application covering rental agreements, automated billing, activity reporting and backups — end-to-end handling of the data an inventory-and-billing workflow depends on.

Education

Bachelor in Information Systems — Highest Honors (Mention Très Bien) *2022 – 2025*
ESSAT Gabès *Gabes, Tunisia*
